

MEETS U.S. CARB TIER II EMISSIONS REQUIREMENTS REFER TO THE MAINTENANCE ADJUSTMENTS

3 4 5 6

The image shows a close-up of a red generator's control panel. A black fuel selector switch is mounted on the panel, with a white dot on its top edge. To the right of the switch is a black sticker with white and red text. The sticker includes the text 'GASOLINE ON' at the top, a circular logo for 'HUTCH MOUNTAIN' with 'PROFESSOR GENERATORS FOR LIFE' and 'WISDOM SURVIVAL & FUN' around the perimeter, and the website 'HUTCHMOUNTAIN.COM' below the logo. At the bottom of the sticker, there are two options: 'GASOLINE Off PROPANE-NG' and 'ENGINE OFF', each preceded by a white dot. The generator's body is red, and a black textured grip is visible above the switch. To the left, a compartment contains various colored wires.

SMART SIM

Hour Meter

Marine, ATV, Motorcycle, Snowmobile

- Track the Service Life of Your Vehicle-oil changes, valve adjustments, spark plugs, etc....
- Completely Waterproof
- Inductive Design - no battery required.
- Works on Any Gas Engine.
- Easy Installation - connect the hour meter & spark plug with the wire, then use the screws or zip tie to fix the hour meter.

Quick Facts

Compatibility: All motorcycle models (anything with a spark plug really should work)

Hardware Included: Meter, pick-up wire, two screws, four zip ties

Tools Required: 2.5mm hex key

Hour Meter Installation Method

1. Wrap the included pick-up wire around the spark plug wire five times. Start wrapping the pick-up wire about 4cm from the end of spark plug boot. Use the included zip tie to secure the pick-up wire wrapping as shown in the photo right.

2. Before continuing the installation, insert the pick-up wire into the rear of the meter. Start the motor to make sure the meter is picking up the ignition signal. If it is, this will activate the timer on the meter and the icon on the left of the LCD will flash. You'll have to wait at least 6 minutes for the timer to increase the timer display (1/10th of an hour). If it is not picking up the ignition signal, slide the pick-up wrap closer to the spark plug boot.

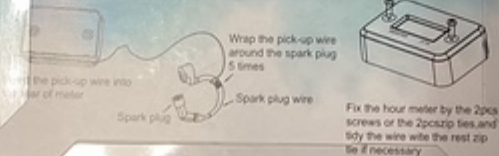

3. If the meter is successfully picking up the spark signal, run and zip tie the pick-up along one of the throttle cables. **Make sure the pick-up wire can not make contact with the engine.** Also, make sure you leave enough slack (about 8 cm) so removing the spark plug wire is possible. Keep in mind the general location of final mounting location on the frame spar.

4. Securing Method:

- Drilling into your frame with $\Phi 2.5\text{mm}$ socket, then secure it to the frame coming with two pick-up screws.
- Fix the hour meter to the frame spar with the zip ties.

That's all there is to the installation. Now you're set to accurately track your maintenance. **Don't forget to record the metered time when performing maintenance.**

Installation diagram

HONDA
GENERATORS

Parallel Cables—5 ft (1.5m)

- Double the power (using multiple outlets)
- Durable molded cables and connectors
- Only for use with two identical models

- Fit:**
- ▶ EU1500V (all models)
 - ▶ EU2000V (all models)
 - ▶ EU3000V (handi model only)
Not for use with EU3000V
(electric start) model.
